

LOGAIRE DOUBLE FLUESHIELD

This flueshield is designed to fit directly to the Logaire range of woodfires. The reflective stainless steel inner shield and vented cavity between rear and inner shields ensures maximum shielding of walls directly behind the installed woodfire.

The black coating of the outer shield is high temperature silicon resin paint and will not be effected by normal operation of the woodfire. This outer shield may be re-sprayed with "Stovebright" high temperature paint to change the outer shield colour to match your flue or décor. If you do wish to paint the outer shield another colour, remove the plastic film from the outer shield only before painting, remember to leave the plastic film on the inner shield to avoid any over spray on the reflective stainless steel surface. After painting, remove the plastic film from the inner shield.

FITTING INSTRUCTIONS

1. Unpack the flueshield and detach the two brackets and familiarize yourself with the illustration below.
2. **Remove the plastic film from both the outer and inner face of the flueshield, a sharp knife or razor blade may be required to clean up surplus plastic film.**
3. Fit the lower bracket to the woodfire as per the illustration. Install the flueshield into the lower bracket. Now fit the upper bracket to the flueshield as per the illustration. Attach the upper bracket to the flue pipe using rivets or self-tapping screws.
